

PARSJAHD Thermowell

Temperature Measurement

Monitoring Plants for Accurate Measurement

Wide variety of industry standard process connections
Cladding for corrosive or abrasive process loads
Testing and certifications including
wake frequency calculations

Thermowells & protection tubes are tubular shields inserted into and fastened on an existing pipeline or vessel and accept numerous types of temperature probes including RTDs, thermocouples and temperature gauges. They are used to protect temperature sensors from harmful working conditions and to facilitate the repair or replacement of sensors without interrupting the process being monitored. PARSJAHD thermowells are engineered and manufactured to ensure compliance with the latest international standards.

Based on application, a variety of thermowell types are available based on process connection and stem style to meet specific process requirement as well as to optimize the customer request.
